PACKET WITH TWO PURPLE TOP BOTTLES

We are having people contacting us for our water when they or their friends or loved ones are having a major health problem that they are dealing with. By major, we mean they are fighting cancer, leukemia, or some other major problem. We have modified our introductory box, which usually contains 6 red/green and one purple bottle, by exchanging one of the red/green with a second purple, we now ship 5 red/green and 2 purple.

When received, we suggest that *one* of the purple bottles be consumed the first day. We suggest opening one of the purple bottles, pouring about 1/3 of it in a glass. Sit down and sip that 1/3 of a bottle slowly over a period of 15 to 30 minutes. *Drinking quickly might cause some folks to get a little dizzy and we don't want anyone to fall and hurt themselves.* This possibility will pass very quickly.

Then as you pass the remaining 2/3 of the bottle, sip (or some would say nip) by getting some in the mouth and swallow it slowly as you go about your daily tasks. By the end of the day or before, one would have consumed the first bottle.

Then get on the red/green as suggested and drink daily as much as you wish. Remember that the red/green is mixed ***one tablespoon full*** into a gallon of your regular non-chlorinated water.

The other purple bottle should not be opened but used as suggested by ***removing the foil*** and let it float in the tub while soaking your body. It can help eliminate pain by holding it to the body where one might be experiencing pain, etc.

This procedure should really elevate the oxygen level in the body rather quickly and that is what we are trying to accomplish. We make no medical claims but we like to see the pH of the body in the 7.3 – 8.0 range for best health potential as we understand these things.

Be blessed.

Sept. 11, 2010

Memo for Record from Mr. Fred Neal.

This is in response to questions that been asked about the oxygen water.

Since the late 1990's, I had used an off the shelf technology, which had been developed by Rife, Tesla and others over the last 100 years or so. It occurred to me then that I could take this little machine with me and if I were on a late night trip, there was a way to feed oxygen to myself and as a result, could drive all night without yawning and falling asleep. Then in 2004 I was working with the same technology to develop a detection device to locate IED's that were killing our troops. I was able to finish that technology but haven't built the actual unit just yet. However, during this time, I was stricken with polymyalgia and was in 100% pain and at death's door. The doctors finally diagnosed it and when asked about it, they said it was an inflammation of the blood vessels. What causes it? They don't know. Then I learned how to use my previous discovered technology to convert it to my body and was very quickly getting the medical profession out of my life. If they didn't know what caused it, how would they know which drug would solve the problem. The Bible tells me that I came out of a „garden“ and not a chemistry lab. My basic country instincts tell me that my healing would also come from the garden and not through the chemistry lab. Water seems to be a good way for the Lord to do it, eh? There was no part of me that was not in pain. I was at death's door but was able to cheat death and within 30 days of getting on my oxygen therapy, there was no more pain and it hasn't been back to this date. Anyway it became clear to me that oxygen is the healing fluid for all situations. That is my engineering evaluation of my situation and saw no reason why it wouldn't translate to other species of animals, fish, waterways, etc. During this process, God showed me how to supersaturate the oxygen molecule. Everyone knows that can't be done, but everyone knows that bumble-bees can't fly. What does this mean? Water is very unstable but when I did what I did, I was able to strengthen the valence orbit of the oxygen to a stable state. In other words, I was able to modify the molecular structure and cause the oxygen to remain in a steady state. It does not appear that this steady state of oxygen changes when bottled in either glass, plastic or left in an open container. This is the part that no one in the world has been able to accomplish. Additionally, I have found out if the water is wet, the oxygen is still in it at the higher level. When I use this technology, I am working with energy levels and to give an example of what I mean, it is called „general vitality“. Oxygen levels can also be measured and the average person on the street has a general vitality of between 450 – 600 and an oxygen level of maybe 900. A good grade of drinking water will possibly have an oxygen level of 1400, so, when a 600 energy level is exposed to a 1400 level of oxygen, through satisfying ones thirst, we would expect a rise in energy level or a

refreshing. I have learned further that poisons displace oxygen in the body driving the pH down but oxygen displaces poisons in the body, conversely, driving the pH up. Ideally we are told that our pH should be between 7 and 8. All diseases require an acid environment to live and that is a pH of less than 7. Above a pH of 7 is in the alkaline range and diseases cannot live there as that is an oxygen rich environment.

I think the reason people are sick is that they are low on oxygen!

I started out raising the oxygen level to 1 Million on my scale, then 2 Million and on up the scale over a period of time. This level of oxygen is unheard of but it is difficult to measure unless you have the right equipment. There is equipment, I am told, on the market that can measure it but it seems that no one is going to build a Million dollar piece of equipment to measure something that can't be done. Anyway I got the water to 20 Million, left it for a time, no adverse reactions so I raised it to 30 Million. This seemed to work real well and a lot of folks got their immune system kicked back in and now don't have colds or flu during the winter months. Then I wanted to design a water that would be good for burn victims. Highly oxygenated water has instant tissue healing qualities about it and it has worked on minor burns but as yet I have not had the opportunity to get it into a burn unit. People with stomach, bladder, and colon cancer have drank our water with much success. I am excited about it as I have had three hernia operations, one low that had to be repaired, and then an umbilical hernia where they did about a 4 inch incision horizontal above my navel. Well all those scars have disappeared so I know first hand that the water has tissue healing qualities. You can imagine what it would do to damage done on the inside of the body. People have heard about my water and have contacted me for it while sharing with their friends and loved ones. This has spread by word of mouth and consequently more and more are sharing in the blessing. As an intro. to my water, I have suggested that people get 6 bottles of what I call my red/green and I will include a purple top bottle for free during this intro time. The red/green is my drinking version, where you put one tablespoon of this water into a gallon of your own good drinking water. It will charge it up with oxygen and will be interesting to see what happens. All folks are different so it works on people differently. Then I suggest that people soak in the bath tub 2 – 3 times a week. To do this effectively I suggest taking the purple top out of the foil, and put it, **unopened** into the bath water. Let it be like a cork. After 5 minutes the whole tub is charged and suggest you lay in it for 30 minutes or whatever is comfortable for you. Drinking on the inside, soaking on the outside will eliminate poisons in a great way plus raising the oxygen level in the body. If disease is a poison, what does it do for it? If you should have an ache in your body, hold the purple top bottle next to the pain and watch it go away. Many folks have my water and will actually sleep with the purple top bottle. The 6 bottles of red/green plus one purple bottle, fit nicely in a Postal Priority Mail Bulk box and will ship for \$10.95. It is enough for one person for

about 6 months. A bottle of the red/green will make about 50 gallons of drinking water which is very inexpensive as compared to the cost to purchase bottled water off the shelf. Our water is inexpensive but it is not, "cheap".

Disclaimer: The information presented here is for entertainment purposes only (entertainment for learning) and is not intended for medical advice. I have first hand knowledge of what it did for me so perhaps it could be good for you also. Others are doing the same thing I did and they are reporting some interesting results.

You **probably** need to drink water anyway if you want to live and if you do, you may as well drink what will help you.

This God inspired technology allows me to enhance the water without opening the bottle. This is the proprietary technology that some folks don't understand and we don't reveal how it is done. Col. Sanders, Coca-Cola and others market their products without revealing their secret recipes so with that precedence we take comfort in keeping our technology secret also. Our product is not "just water", it is a "technology whose time has come". Thus we consider it "Liquid Manna".

The shelves at the store are filled with just water but we have the only Liquid Manna in existence. Perhaps you would like to partake with us and if so we would welcome you to contact one of our fine representatives.

Thanks and May God Richly Bless you and yours. Fred Neal

We have basically 2 types of water and we identify them by the colors on the cap.

1. **Red/Green** is specifically designed for people with a real health problem. We recommend a cap full or Tablespoon per gallon of drinking water that you normally drink. This water has many Millions of oxygen units as compared to about 1400 oxygen units in regular water.
2. Then here is a **purple top** that is our **“hammer”**. If you can take a tub bath, you can put the whole bottle (unopened) in the water and in less than 5 minutes, the entire tub will be charged. Lay in it as long as you can. It will have a homeopathic effect whereby the skin will absorb it and if you are drinking our water also, you will get oxygen on a cellular level from the inside/out and the outside/in. This expedites getting rid of the poisons, which is your goal.

The Purple top is wrapped in foil to keep it from migrating to other things nearby but when you use it, be sure to take it out of the foil. We have people that will sleep with the bottle (white, red/green and/or purple). It has an abundant amount of energy. If you have a pain, hold either bottle up to the pain and it should go away very quickly. Suggest you use the purple top for Migraines. Hold it unopened next to the pain and many times it will go away.

We are still discovering what all it will do so don't be surprised. We have had no adverse effects in 5 years so enjoy and let us know how it works in your situation. Remember, all diseases are caused by acid conditions. Poisons displace oxygen, however oxygen turns the tables on poisons. If you are sick, you have an acid condition, pH=less than 7. Our water will help raise the pH level in the body to the alkaline side, pH=7+ which is where your health lies.

This is the fountain of youth so look out!!! Be blessed.

***We make no medical claims. Engineering is our background and not medicine.
We have just learned how to increase the oxygen in water to a very high level.***

Some testimonies and thoughts that could be of interest....

Our goal with the water is to move the body from an acid state into the alkaline state. Reading other literature, tells us that all diseases require an acid environment to survive. That is a pH below 7. If you are 6 or 5, you got problems for sure so work on correcting it. The break point is pH = 7. I like to see a pH of 7.3 to maybe 7.8. When you test with pH paper, the mouth will give a better reading in my estimation. Between meals, swallow 3 - 4 times before testing with the pH paper in the mouth. Remember that the kidneys dispose of poisons so don't rely on a urine pH to tell you what you want to know. You would suspect that it would show below 7 there. Should you experience a burning sensation during urine elimination it probably means you haven't been drinking enough water. Work with your body and it will serve you better. Taking coral calcium will also aid in raising the pH.

Some have asked about water vs. diabetics. Had call from a long time friend who is diabetic. I had placed a bottle of the purple top (special for extreme cases) in his hands a week ago. I told him to use it where ever he might have pain or whatever. He called to tell me that he has had no feeling in his feet for a long time. He has been placing one foot on the bottle for a while and then doing the same on the other. Said for the first time in ages, he now has feelings in his feet and they are getting better. He asked how long it would take for things to get normal? I said, "I don't have a clue so you can keep me posted and we will both know."

What we have been able to do is to supersaturate the oxygen molecule, which they say can't be done. Our water will hold that level of charged oxygen as long as it is wet. Even in an open pond or container outside or anywhere it doesn't matter. As far as I know, no one has ever been able to do this. We have been able to do what Dr. Warburg was talking about in the 1940's and '50s when he won the Nobel Prize.

Poisons in the body will cause swelling of tissue. When tissue swells around a wind pipe or tube, it will actually cause the pipe or tube to become smaller because of the pressure from all around. We have had several people that quit snoring after they had been on our water for a period of time. Get rid of poisons, swelling goes down and the body don't have to gasp for air, ok? Swelling of the prostate will shrink the urine tube and makes elimination more difficult and they can't eliminate entirely, hence having to go 2 - 3 times a night. Several have experienced the fact that after some time they can

sleep the entire night without getting up. Some have noticed this within 2 - 3 days but most take longer. Everyone is different but these are things you might look for.

I GOT A PHYSICAL LAST WEEK AND MY PH CAME UP FROM 6 TO A 7 IN THREE MONTHS. NOT BAD HUH?

I'VE BEEN DRINKING A LOT OF YOUR WATER.

This just came from a friend in Shreveport whom I have known for maybe 25 years or so...times moves fast. He has been on the water for some time, but here is what he just reported today...thanks Murwyn, this is good news.. Fred, I went to my Dr. last week as promised for my 3 mo blood sugar ck. 6.5 on the 3 mo ck is pefect. Mine was 6.6 as compared to the previous one of 6.9 My pH went from 6.2 to 7.2 Not bad for a 72 year old guy, huh!!! Thanks a bunch, Fred

Was in Springfield today and had my eyes checked. It had been almost 3 years since my last prescription for glasses. At that time the eye doctor told me that I needed to keep tabs on my eyes because cataracts were forming. After about 3 months, I checked with him again and then in a couple more months to see how the cataracts were doing. His answer both times is that they are no better and no worse. Of course I have been on our water all this time, increasing the oxygen to where it is now and increasing it in me a lot more. Today, I told him that I was really interested in what the cataract situation was. He checked and could find no trace of cataracts and he said that the small black spots that were in my eyes back then are also gone. He says it is totally clear. I told him a little about the water, of course. Just had a call from a lady whose sister lives in Fla. She had failed her eye test for drivers license renewal and was really upset about it. The reason was a detached retina. Sent our water to the lady in Fla. and she started drinking it. She had heard us talk about the tissue healing qualities and decided rather than put the water directly in her eye, she soaked a pad and just put it around the eye in different spots. She noticed the swelling went down. Later she left her keys on the counter and from a distance she could see them. She covered the good eye and could see the keys with the eye that has a detached retina. She was really excited and wanted to report this so I am passing it on to the group as an encouragement.

FRED..... CAN'T HELP IT! I JUST HAVE TO PUT ANOTHER FEATHER IN YOUR CAP. WE HAVE HAD OUR HOUSEHOLD ON YOUR WATER FOR A YEAR NOW, AS YOU KNOW. WE ALSO HAVE HAD OUR SON AND HIS WIFE LIVING WITH US FOR THAT TIME. THEY ARE THE PROUD NEW PARENTS OF A 4 MONTH OLD BOY. ABOUT A MONTH AGO THEY BEGAN TO NOTICE THAT THE BABY WAS HAVING SOME SHOW OF FRESH

BLOOD IN HIS STOOLS. THIS OCCURRED SEVERAL TIMES AND THEY BECAME WORRIED ENOUGH THAT THEY CALLED THE BABIES DOCTOR. THEY WERE TOLD TO BRING IN A SOILED DIAPER SO TEST COULD BE RUN. SEVERAL DAYS WENT BY AND WE HEARD NOTHING. THE PARENTS CARRIED THE BABY DOWN TO NACODOCHES TO STAY A COUPLE OF DAYS WITH HIS OTHER GRANDPARENTS AND THE NEXT DAY THE DOCTOR'S OFFICE CALLED WITH THE INSTRUCTIONS TO GET THE BABY TO THE HOSPITAL, HERE IN LONGVIEW, IMMEDIATELY! THE RESULTS OF THE TESTS WERE IN AND THE BABY HAD THE WORST CASE OF SALMONELLA THEY HAD EVER SEEN. THEY HAD A PLACE RESERVED FOR HIM IN THE INFANT INTENSIVE CARE UNIT AND WOULD BE WAITING ON HIM.

FYI, my dad who thinks he is overdosed if he has to take two aspirins the same day used the purple bottle in a foot bath for several days to get rid of problem from infected ingrown toe nail. He cannot find another reason other than water that might have contributed to its healing. Additional use for him --> he had severe indigestion for a few days and took a sip or two directly out of the red/green bottle, sat down to relax, burped a couple of times and pain went away all within only a couple of minutes of sipping water. This has now happened several times with same results. He is a believer now. Right corrdated artery was blocked between 50 & 60%. Cholesterol was high and triglycerides were out of control even while I was taking Lipitor. After drinking oxygenated water for 6 months, my Cholesterol and triglycerides are in the normal range. After sonogram my corroded artery is no longer a problem. -----Vic 3/15/10 This testimony related to our water was received just recently. (June 2010) Jamie, in Arkansas is with the telephone company in a small town in Northern Arkansas. He, his wife and 3 children have been on our water for some time and their testimony is in our previous document. However, Jamie was using a chain saw and was cutting a tree at his home when the situation went bad and he had his hand crushed by the tree situation. After much difficulty, he was able to get his mangled hand loose and went to the house to call for medical help. He said he took two bottles of our water and drank them on the way to the emergency room. They told him they may not be able to save the hand because of the condition. They cleaned out the bone fragments, put a titanium plate on his hand to hold the pieces together, using 8 screws. Then injected synthetic bone graft material into the injury. They told him that if it did not heal in 12 weeks, he would have to have another operation using bone from his hip to try and save his hand. He was not allowed to go back to work for 10 days and then he got the release to go back. They limited him to only being able to pick up 10 pounds with his good hand. Three weeks from the day of the accident, he called me to tell me about it and said he had just gotten back from the

doctor and the doctor was surprised at what he saw. He said there was no sign of the bone graft and that the hand had healed completely according to the x-rays and he could go with no further restrictions. Other than the hand being a little sore, he was doing great.

Our water has worked on broken bones before with the same success. We are quiet excited about this testimony. The high concentration of oxygen seems to confirm our belief that oxygen is the healing fluid for all situations.

ROY AND ELOISE - TESTIMONIALS WASP STINGS My husband was outside and ran into a wasp nest at which time one popped him on the top side of his pointer finger. He came into the house and placed the finger in a cup of the red/green water and in two minutes or so the sting was gone and he forgot all about it. He sprayed the nest to rid it of the wasps and went back out in a couple of days and a wasp popped him on top of his ear. No way to soak the ear in the water, but he carries a small bottle in his pocket so he decided to try it and see what happened. He took the bottle and laid it on top of the sting and the pain disappeared as it did on his finger a couple of days earlier. No spot of the sting remained on his finger or his ear. **CUTS** Eloise was slicing cucumbers on the mandolin slicer and somehow her thumb was sliced right under the fingernail on the fatty part of the underside of the thumb about an inch down. It was hanging. Immediately put it in a cup of water to soak and kept it there for a while. I put a band aid on it to hold the cut closed but kept soaking it off and on for the rest of the day. The next day it had already begun to heal around the edges (the skin was attaching itself). I soaked it on and off for some time (2-3 weeks probably) and no scar remains. **SWIMMING POOL** My son and his wife have a swimming pool but they had not used it for a couple of years but the water had collected in it and it was grungy green, thick in places and ugly. He poured about three gallons of the red/green mixed water in it and then threw in 3 or 4 of the 16 oz. red/green water and forgot about it. In about 5 weeks they checked it and it was crystal clear and you could see the outline of all the leaves on the bottom of the pool. Much easier to clean than the grungy green stuff. **HEADACHES** Our son has barimetric headaches and he uses the purple top water bottle for those. He had flown to New York and forgot his water and he said he would never go on another trip without it. He and his wife were going to fly to Boston after that and he was concerned about getting the water on the plane. I suggested he go to WM and pick up the package of travel bottles (cosmetic type, etc.) and put the water in them in his wife's make up bag. Suggested he might also want to put a drop or so of different food coloring in each bottle (don't know if he did that or not). At any rate, it flew and he had his water with him.

BURNS I keep a bottle of the red/green top water in the kitchen. If you burn your finger, just pour some in a container and put the spot under water for a couple of minutes. The burn goes away and it does not blister.

SKINNED KNEES-INFECTED HANG NAILS-SCRATCHES, ETC Best if it can be soaked but if it is in inconvenient spot just get some gauze and keep it saturated. Takes a little longer than soaking but is just as effective. You can lay the bottle against it if you'd like and it will do the same. INGROWING TOE NAIL Soak it for a few days and things clear up.
